

SATCOM GLOBAL | IPSignature 4

Multi-router for increased network performance and usage control

IPSignature 4 is our new multi-function device providing centralised control of vessel network connections and communications. Enabling 'bring your own device' technology, IPSignature 4 provides access to high quality, low cost voice for business use and crew calling, as well as optimising data services for email and the web. Advanced network functionality and the unique dual board design for reliability and failover, ensures you're never left 'all at sea.'

Features and Benefits

- **Efficient data usage**
Proxy data compression and web filtering for efficient use of data, bandwidth shaping and QoS management.
- **Greater visibility and control**
Shore portal for monitoring, status management and provisioning. Manage and upload crew profiles from shore.
- **Firewall management**
Control and manage firewall settings remotely and locally.
- **Remote access**
Remote access via secure shell, VPN or web.
- **Reporting**
Integral Netflow monitoring reports.
- **BYOD**
Bring your own device. Crew can access data services via their own smartphone, tablet or laptop.
- **Crew calling**
Flexible and cost effective voice services for operations and crew use. Ability to provide allowances to crew and recover business data costs from crew usage.
- **Internet café**
True internet café hotspot functionality.
- **Override facility**
Master "kill switch" for emergency / business override.
- **Dual board reliability**
Dual board design for reliability and failover – immediate recovery via integrated internal secondary units. Out-of-band management for failover.
